

### Overview and Methods

In 2006 the Chicago Council on Global Affairs (formerly the Chicago Council on Foreign Relations) undertook a major study of public opinion in the United States, China and India. Organizations in several other countries expressed interest in participating in this study. WorldPublicOpinion.org took the lead and recruited additional countries around the world to participate. Ultimately, polling was conducted in 18 countries and the Palestinian Territories. The countries and research organizations are listed below. These include roughly 56 percent of the world population. Since resources varied, not all questions were asked in all countries.

Further below are details of the methodology used. All samples were probability samples; in two countries these were limited to urban areas, and as noted certain countries did not sample all regions.

<sup>1</sup> In Argentina, the survey was conducted in the City of Buenos Aires, 24 departments of the surrounding area (together called Great Buenos Aires), La Plata, Mar del Plata, Mendoza, Córdoba, Rosario and Tucumán.

<sup>2</sup> In China, a total sample of 1964 respondents were interviewed representing both rural and urban areas. Approximately 36 non-literate respondents were screened out of the sample.

<sup>3</sup> In India, a face-to-face national probability sample was executed with a sample of 3132 which was reduced to 2458 after screening out respondents with no formal education or who were illiterate.

<sup>4</sup> In Indonesia, the sample was an urban, suburban, and rural sample drawn in 10 provinces representing major island groups.

<sup>5</sup> In Israel, a random telephone sample of adults who had landline telephones was conducted; 503 interviews were conducted in the Jewish sector and 90 interviews in the Arab sector.

<sup>6</sup> In the Palestinian Territories, the survey was conducted among the population of the West Bank, including East Jerusalem, and the Gaza Strip.

<sup>7</sup> In Peru, the survey was conducted in 35 districts of Lima and Callao, including Lima, Ate, Barranco, Breña, Carabaylo, Chorrillos, Comas, Independencia, Jesús María, La Molina, La Victoria, Lince, Los Olivos, Magdalena, Miraflores, Pueblo Libre, Puente Piedra, Rimac, San Borja, San Isidro, San Juan de Lurigancho, San Juan Miraflores, San Luis, San Martín de Porres, San Miguel, Santa Anita, Santiago de Surco, Surquillo, Villa El Salvador, Villa María del Triunfo, Bellavista, Callao, Carmen de la Legua Reynoso, La Perla, and Ventanilla.

<sup>8</sup> In the Philippines, the survey was conducted in metro Manila, and the island of Luzon, Visayas and Mindanao.

<sup>9</sup> In Russia the survey was conducted as a face-to-face national probability sample, excluding only areas of military conflict (e.g., Chechnya) and certain highly inaccessible areas; such areas together represented only five percent of the population of Russia.

<sup>10</sup> In Thailand, the survey was conducted in 10 provinces of the country including Bangkok, Samutprakarn, Prachuabkirikan, Rayong, Chiang Mai, Kampaengpetch, Khon Kaen, Sakonnakorn, Chumporn, and Nakorn Sri Thammarat.

<sup>11</sup> In the United States, the poll was an online survey drawn from a nationally representative sample of the Knowledge Networks online panel. This panel is randomly selected from the population of telephone households in the U.S., and subsequently provided with Internet access if needed.
